

## ASP Features

- Top level admin user oversees all domains, creates Domains and Domain admin accounts.
- The Domain Admin user can perform all admin tasks within a single Domain only.
- Does not see outside own Domain.
- Aliases are also private within Domains.
- Address Book are private within Domains.
- System aliases appear in ldap and are therefore, only visible to admin user via alias link in admin GUI.
- System aliases such as maildaemon, postmaster are added to each Domain.
- Statistics are by server rather than Domain.
- Allow same login across Domains.
- A switch is in place to enforce full email address logins.
- Enhanced interface to enforce the Domain in a users email address and restrict it to the Domain of the user.
- Backups by Domain
- Login as top level and Domain admin into Webclient.
- Domain admin can create top level folders for sharing.
- Implemented Group/Domain ACLs so that shared folders are easily shared to Domain rather than individuals as is it currently done.
- Remove the cyrus 'anyone' from all but the top level admin so that folders can not be given server wide access to 'anyone'.
- List of users to ACL assignment are restricted to users within the Domain.
- Implemented Domain privacy/security for free/busy or availability in Calendar data.
- Much more...
