

# INSIGHT CONNECTOR AND ADDRESSBOOK

## SHARING MADE EASY...

The Bynari Insight Connector is a desktop plug-in for the email client, Outlook. It allows Microsoft Outlook® (2000-2007) to talk to email servers like Insight Server, neonInsight, Cyrus, Courier, Kolab and Citadel and enables all of its groupware functions.

With the Insight Connector plug-in, Outlook users can share all of the features and functions that they are familiar with when connected to an Exchange® server. Insight Connector supports sharing of users' individual email folders, calendaring information, meeting scheduling, and much more.

Bynari's AddressBook is a desktop plug-in that emulates Outlook's Global Address List (GAL) and supports any LDAP directories.
