

Introduction

This Quick Installation Guide is intended to be used to start your server quickly. It does NOT contain all of the information available in the Insight Server 4.3 Admin Guide.

Supported Linux Distributions

Insight Server will run on major distributions and their latest versions. It has been thoroughly tested with Red Hat, SuSE, Debian, Ubuntu and CentOS.

Installing

Installing the Insight Server is as simple as 1, 2, 3... Once you meet the system requirements, (Before You Begin section) you can install your new Insight Server in three simple steps.

1 Step 1

Disable Applications Using Needed Ports Sendmail:

```
# /etc/init.d/sendmail stop
```

To permanently disable sendmail:
(Red Hat) # `chkconfig sendmail off`
(Debian) # `update -rc.d -f sendmail remove`

Apache:

```
# /etc/init.d/httpd stop
```

To permanently disable Apache
(Red Hat) # `chkconfig httpd off`
(Debian) # `update -rc.d -f apache2 remove`

2 Step 2

Install The Software

(Log in as ROOT on command line shell)
(Red Hat) # `rpm -ivh insightserver-x.x.x.i386.rpm`
(Debian) # `dpkg -i insightserver-x.x.x.i386.deb`

Run the Setup Script
`/opt/insight/etc/insightserver-setup.sh`

3 Step 3

Log Into Your New Server

Log into the admin console of the web server through your browser:
<http://yourserveripaddress> or
<http://yourdomain.com>
The administrator username is "manager" and the initial password is "bynari".

NOTE: Change admin password immediately after registering the product.

The registration section will appear. Agree to the EULA and enter your license key or go to 30-Day evaluation mode.

To change the manager password, go to the "Accounts" section and click on the manager account. Type in the new password (twice) and click the "Update" button at the bottom.
